Mutated BRCAl genomic sequence from sample set MSKCC family 19921.
Cancer therapy, breast and ovarian cancer predisposing gene; immunogen; antibody production; germline alteration; probe; lesion neoplasis; human; gene therapy; protein replacement therapy; protein mimetic; BRCAl; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ħ
                                                                                                                                                                                                                                                                                                                                                                                 Immunoglobulin binding polypeptide, protein L - used for prodn. of pharmaceuticals and for immobilising antibodies e.g. on columns, in diagnostic tests and in assays
bisclosure; Figure 1: 29pp; English.
Protein L forms a complex with immunoglobulin Kappa light chain. Purified protein can be used as a reagent for immobilising antibodies e.g. on columns, in diagnostic tests and in assays.
may also be used in the production of pharmaceuticals.

Rice is the most important food crop in the world. Half of the world population, especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of AII Mbp (Arumuganathan and Barle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety using EcoRI as the cloning enzyme. The library contains $5,296 clones with an average insert size of 121 Kb providing approximatley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubby spotted), represent the whole library for colony screening and can be requesed from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

//note="Vector: pBaCIndigo; Site_1: ECORI; Half of the world population, especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate.
// Monocotyledonous rice; a diploid plant (2n-24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, when a vortage insert size of 121 Kb providing approximatley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99:9 %. Three high density filters, each containing library for colony screening and can be requested from the Clemason University becomes a particular sequested from the clemason University becomes a particular sequested from the clemason University and the clemason of the particular sequested from the clemason University and the clemason of the particular sequested from the clemason University and the clemason of the colony and the clemason of the colony colony colony and the clemason of the colony colony

Rice is the most important food crop in the world. Half of
the world population, especially those inhabiting highly
populated areas of the humid tropics and subtropics, rely
on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n-24) with a
haploid genome equivalent of 411 Mbp (Arumuganathan and
Earle, 1991). The relatively small genome of rice, three
times larger than that of Arabidopsis, makes it suitable
for genomic studies. In order to facilitate positional
cloning, physical mapping and genome sequencing of rice,
we have constructed a BAC library from Oryza sativa,
Nipponbare variety using EcoRI as the cloning enzyme. The
library contains 55.296 clones with an average insert size
of 121 Kb providing approximatley 15 haploid genome
equivalents: The deep coverage allows the isolation a
particular sequence with a probability of 99.9 %. Three
high density filters, each containing 18,432 clones
(doubly spotted), represent the whole library for colony
screening and can be requested from the Clemson University
BAC/EST Resource Center (www.genome.clemson.edu):

Rice is the most important food crop in the world. Half of
the world population, especially those inhabiting highly
populated arreas of the hunid tropics and subtropics, rely
on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n=24) with a
haploid genome equivalent of 431 Mbp (Arumqanathan and
Earle, 1991). The relatively small genome of rice, three
times larger than that of Arabidopsis, makes it suitable
for genomic studies. In order to facilitate positional
cloning, physical mapping and genome sequencing of rice,
we have constructed a BAC library from Gryza sativa,
Nipponbare variety using EcoRI as the cloning enzyme. The
library contains 55,26 clones with an average insert size
of 121 Kb providing approximatley 15 haploid genome
equivalents. The deep coverage allows the isolation a
particular sequence with a probability of 99.9 %. Three
high density filters, each containing 18,432 clones
(doubly spotted), represent the whole library for colony
screening and can be requested from the Clemson colony
screening and requested from the clemson University

/note areas of the humid tropics and subtropics, rely
on rice as their primary source of carbohydrate.
/note-cytledonous rice is a diploid plant (In=24) with a
haploid genome equivalent of 411 Mpp (Arumuganathan and
Earle, 1991). The relatively small genome of rice, three
times larger than that of Arabidopsis, makes it suitable
for genomic studies. In order to facilitate positional
cloning, physical mapping and genome sequencing of rice,
we have constructed a BAC library from Oryza sativa,
/nipponbare variety using ECORI as the cloning enzyme. The
library contains 55,296 clones with an average insert size
of 121 Kb providing approximately 15 haploid genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 % Three high density filters, each containing 18.432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/GST Resource Center (www.genome.clemson.edu)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, euphyllophytes; Spermatophyta; Magnoliophyta; Liliopsida; Poales; Poaceae: Oryza.

ALIGNMENTS

Composite cyclytic activity and differentiation of cris. which may rainibit cytolytic activity and differentiation of cris.

Fromposis. composition activity and differentiation of cris.

Example; Page 12; 29pp; English.

Example; Page 12; 29pp; English.

Control of cris.

R95413, and R95413-R95431 represent palindromes and fragments of communication recorded antigens. This sequence represents the hard-B2702 84-79-84 palindrome. These sequences can be used to isolate the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane of protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSC70.

Control of a limited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable control of an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide.

Column containing a covalently bound HLA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with compounds can be screened for their effect on the cytolysis. Candidate compounds can be screened for their effect on the cytolysis.

Crottoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74.

Modulation of CTL activity can be inhibited in a cellular composition mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand. 12-NOV-1996 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or tradting autoimmune diseases.
Claim 17: Page 35: 41pp; English.
This sequence represents a specifically claimed immunomodulating dimer peptide of the invention. A peptide-type compound or variant is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
19-JUN-1998 (first entry)
Peptide B2702.84-79/79-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-JUN-1998 (first entry)
Immunomodulating dimer peptide #3.
Immunomodulating dimer: immunosuppressant drug; CTL activation;
transplantating dimer: transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 52; DB 1; Length 12;

claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a rycresents amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid; are sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid; sequences related to a class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cyctocxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in proteins of interest to activate CTLs. They can also inhibit the proteins of interest to activate CTLs. They can also inhibit the products of the complement of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702.

These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-MAY-1996 (first entry)
HIA-B2702 CTL modulating peptide (B2702.84-75/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HIA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

CC R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated mitigens. This sequence represents the LAPA 12702 84-75-84 palindrome. These sequences can be used to isolate the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane also immunologically cross reactive with the heat shock protein HSC70.

CC p74 is found in a limited number of cell types, but is particularly composition in a limited number of cell types, but is particularly cc ell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HAA-B2702 palindromic peptide.

CC compositions comprising the extracellular fragment of p74 combined with HAA-B2702.00-164 (see R95416), induces calclum influx, and inhibits compositions can be screened for their effect on the cytolytic activity of corpusinng them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74.

CC containing The amount of binding between the candidate compound and p74.

CC containing Tracells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74 in an amount sufficient to compete compened to the p74 for the binding of the p74 ligand.
                                                                                                                            HLA-B2702 84-75-84 palindrome.

treating autoimmune diseases

Claim 16; Page 35; 41pp; English.

This sequence represents a specifically claimed immunomodulating dimer peptide of the invention. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal activity and the peptide of the compound comprises the formula; A-B, and A-77b; (aa79-44) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a pydrophobic or small amino acid; aa82 - R or L; aa83 - G or R; and as represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid; sequences related to a class I HLA-B alphal domain (Bositions 79-84). They can be used to inhibit cyctoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antiquence peptide can be proteins of interest to activate CTLs. They can also inhibit the proteins of interest to activate CTLs. They can also inhibit the used for preventing rejection of transplants or for treating autoimmune used for preventing rejection of transplants or for treating autoimmune companies.

The products can also be used for detection and diagnosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92207-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16-MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs)

                                                                                                                                                                                                                                                                                                                 Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CLLs)
                                                                                                                  HLA-B2702 CTL modulating peptide (B2702.84-75(T)/75-84).

PERION K, Lightberger C, Krensky AM;

PERION CONTRIBUTION OF The Perion of transplants or lights alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases

Example 1; Page 19; 41pp; English.

Peptides W33784-88 and W33778-9 were assayed for their immunomodulating activity, including the N.terminal acylated and/or creminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = C, R aaf6-71, (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = C, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid; acquences related to a Class I HLA-B alphal domain (positions at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HLA-B alphal domain (positions or any peptide type and also inhibit the proliferation of relis in undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They are also inhibit the proliferation of relection of response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, considered to a thirth of the compount of the products can also be considered to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, considered to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, continuation and proventing response to anti-CD3. The peptide can be used to products can also be considered to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes.
the peptide-type compound comprises the formula; A-B, where A, B = C. (R a876-771) (a379-84) or (a884-79) (Laa77-76R); aa76 = E or V; aa77 = C. R aa76-771) (a379-84) or (a884-79) (Laa77-76R); aa76 = E or V; aa77 = C. D. S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophoble or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HiA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undestrably attacking cells in a host or I hav can also be used in combination with antigenic peptides or proteins of interest to activate CTLS. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, response to arthritis and lupus erythematosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       19-JUN-1998 (first entry)

PT Composes. comprising lymphoid surface membrane proteins - which may finhibit cytolytic activity and differentiation of CTLS.

PS Example: Page 12, 29pp: English.

Example: Page 12, 29pp: English.

R9413, and R85415-R8543 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the composition associated antigens. This sequence represents the larababe protein p74 from a T-cell lysate or p74 is a T-cells surface membrane protein p74 from a T-cell lysate or p74 is a T-cells urface and is also immunologically cross reactive with the heat shock protein CHS-70. P74 is found in a limited number of cell types, but is particularly expressed on B and T cells. P74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic compositions comprising the extracellular fragment of p74 combined with HLA-B3702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis.

Candidate compounds can be screened for their effect on the cytolysis.

Candidate compounds can be screened for their effect on the cytolysis.

Candidate compounds can be screened for their effect on the cytolysis.

Candidate compounds can be screened for their effect on the cytolysis.

Candidate compounds can be screened for their effect on the cytolysis.

Candidate compounds can be anningen presenting cells (APCs), by adding to the mix the extracellular portion of p74, in an amount companion of the p74 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel immunomodulatory peptide-type compound - useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is an immunomodulatory peptide, which comprises a Class I HLA-B alpha-1 domain sequence. It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Non-A, non-B, non-C, non-D, non-E Hepatitis virus reagents - useful for diagnosis and therapy of hepatitis GB virus
Example 5: Page 222: 661pp; English.

Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV infected tamarin plasma, using standard procedures, was used to prepare a lambda phage HGBV CDNA library. The CDNA clone T00049, which encodes the proteins RB1447-50 and RB2064/65 (the 6 possible reading frames), was rescued from the lambda phage, searched against a sequence database and found to be an unique HGBV Sequence. Reagents which comprise the HGBV DNA, or its protein prods, can be used for the diagnosis, therapy or in a vaccine to

Mew peptide(s) based on Class I HLA antigen domains - used for modulating cytocoxic T-lymphocyte activity towards targets Claim 11; Page 54; Glpp; English.

The peptide is used to modulate cytocoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition. This peptide sequence is more commonly found within larger peptide compounds of not more than 30 amino acids in length.
                                                                          Human leukocyte antigen; HLA; peptide; transplantation; neoplasia; parasitic disease; cytotoxic T lymphocyte; modulation.
           15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.
                                                                                                                                                                                                                   16-SEP-1993.

A peptide-type compound or variant is claimed which has immunomodulating activity.

Compound or variant is claimed which has immunomodulating activity.

Compound or variant is claimed which has immunomodulating activity.

Compound or variant acylated and/or C-terminal amidated or compound settle formula: A-B, where A, B = R aa76-771, (aa79-84) or compounds compounds compounds or N: aa79 = R or G; (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; ca80 = 1 or N; aa81 = hydrophobic or small amino acid. The sequence in the brackets: The compounds compounds compounds compounds or Los S or R; and as represents amino acid. The sequence in the brackets: The compounds composites amino acid sequences related to a class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in hibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in beptides or proteins of interest to activate CTLS. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                   Gaps
donor, i.e. to inhibit transplant rejection. It can also be used in the treatment of autoimmune diseases.

Peptides using the D-form amino acids are more effective immunomodulators than their diastereomers or enantiomers.

Useful biob protein - Mycobacterium tuberculosis (strain H37RV)

C;Species: Mycobacterium tuberculosis
C;Sacession: G70542
R;Cole, S.T.; Brosch, R.; Parkhill, J.; Garnier, T.; Churcher, C.; Harris, D.; Gordon; Connor, R.; Davales, R.; Devilhi, K.; Feltwell, T.; Gentles, S.; Hamlin, N.; Holroyd, Rajandream, M.A.; Rogers, J.; Rutter, S.; Seeger, K.; Skelton, S.; Squares, S.
A,Authors: Squares, R.; Sulston, J.E.; Taylor, K.; Whitehead, S.; Barrell, B.G.
A,Title: Deciphering the biology of Mycobacterium tuberculosis from the complete geno A;Reference number: A70500; MUID: 98295987
A,Stetus: preliminary: nucleic acid sequence not shown; translation not shown
A;Molecule type: DNA
A;Kesidues: 1-349 <COLD.
A;Cross-references: GB:295886; GB:AL123456; NID: 93261785; PIDN: CAB09080.1; PID: e31716
A;Experimental source: strain H37RV

A. Mote: the nucleotide sequence was submitted to the EMBL Data Library, June 1996
C. Superfamilly: unassigned ATP-binding cassette proteins; ATP-binding cassette homology
C. Keywords: ATP; P-loop; transport protein
F:380-574/Domain: ATP-binding cassette homology <ABC>
F:397-404/Region: nucleotide-binding motif A (P-loop)
                                                                                                                                                                                                       R;Kaneko, T.; Sato, S.; Kotani, H.; Tanaka, A.; Asamizu, E.; Nakamura, Y.; Miyajima, N.;
